1 Description of Problem and Associated Algorithms

1.1 CAPT

The concurrent assignment and planning of trajectories problem, or CAPT, involves finding a method of assigning N homogeneous robots to M goals and generating collision-free paths in order to reach the goals. The linear assignment portion of this problem may be offloaded to the Hungarian Algorithm, which is of complexity order $\mathcal{O}(N^3)$.

1.2 C-CAPT

1.3 D-CAPT

2 Code and Runtimes

2.1 C-CAPT (2D)

2.2 C-CAPT (3D)

2.3 D-CAPT
